

COGNITIVE SEARCH FOR LIFE SCIENCES & PHARMACEUTICALS

The life science industry is flooded with diverse information from scientific research, clinical trials, medicine, regulatory data, genetics, statistical data, patient information, etc. The need of the hour is to reshape the way data is collected, analyzed and implemented in order to accelerate internal processes across R&D, clinical trials, regulatory affairs, etc. SearchUnify can make it happen by delivering highly relevant and actionable information that drives innovation and reduces time to market.

Extract Valuable Information from Diverse Database

Pull out relevant information from the complex and diverse biopharma database; including structured data from internal and external sources, and unstructured data from clinical trials, lab reports, experimental drug results, research or patent findings, etc.

Optimize Clinical Trials with NLP-based Text Mining

Leverage NLP to decipher pharmaceutical jargon and colloquial language in lab notes and clinical trial data, helping biostatisticians transform growing clinical trial data into valuable insight. Accelerate clinical trial turnaround time with better patient matching.

Track Down A Network of Subject Matter Experts with AI & ML

AI and ML help to trace the footprints left by experts in trial reports, patient filings, previous collaborations reports, etc. Make use of this data to identify veterans working with a specific drug and facilitate greater collaboration for discoveries.

Shorten Time to Market with Insight Engine & Predictive Analytics

Hit on the potential of new drugs by tapping into intuitive insights gained from complex data volumes. Drive effective drug discovery by leveraging predictive analytics to learn how certain molecular compounds will react with each other.

Advance R&D for the Entire Enterprise

Widen the scope of R&D by analyzing and indexing a large corpus of enterprise data. Empower employees like medical experts, biochemists, geneticists, etc. with personalized and relevant results.

Streamline Regulatory Affairs with ML & NLP

Leverage NLP and ML to adhere to regulatory requirements of the life sciences industry. Set custom alerts to get notified about any changes in rules and regulations based on the publications of regulatory authorities.

WHAT OUR CUSTOMERS SAY

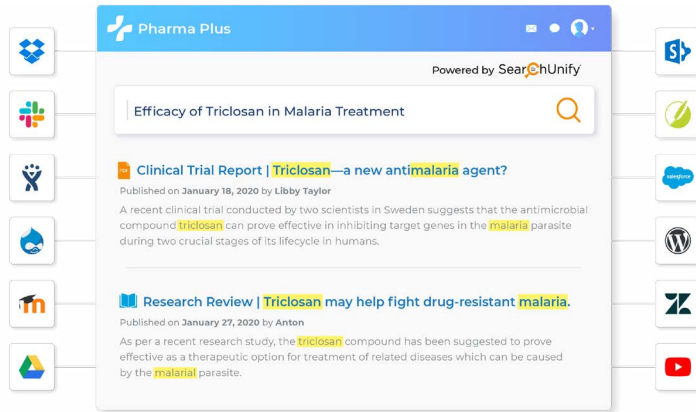

“For us, technology is just one piece of the puzzle while the vendor and its attitude makes up for the rest.”

Giri Iyer

Senior Vice President, Global Customer Support and Success,
Rubrik Inc.
